

ABSTRACT OF THE DISCLOSURE

A dispenser for dispensing interconnected sheets arranged in a stack, includes a top surface, a bottom surface and side surfaces connecting the top surface with the bottom surface. An opening is provided in at least one surface for the removal of sheets from the dispenser. The opening extends over essentially the whole diagonal extension of the stack of sheets. The stack of interconnected sheets are further arranged in the dispenser with an uppermost sheet placed near or in contact with the top surface and adjacent to the opening in the top surface and at least the edges of a lowermost sheet arranged on the bottom surface. A method of manufacturing the dispenser having an opening which extends over essentially the whole diagonal extension of the stack of sheets is also disclosed.
